

Jeff Green Writes Jeff Green Articles/Newsletter Sep 30

My stance does not depend on antibodies or genomics at all. In fact, viruses were discovered and seen 41 years before they were ever sequenced. Viruses can be identified via morphology alone.

"My stance does not depend on antibodies or genomics at all...."

I'm so sorry to have to ask you this once again, and please forgive me for being confused by your comments. However, your comments have compelled me to ask you the following:

Is EVERYTHING that is written in this article:

https://neosante.eu/newsletter/jeffgreen/Jeff Green ARTICLE Neosante 134 EV 2.pd f an ACCURATE and CURRENT reflection of your CURRENT theories or NOT??!!

Jeff Green Writes Jeff Green Articles/Newsletter 4 hrs ago

While the article captures much of the essence of my work, it is not a complete representation. Also, due to the constraints of the magazine format, and the writer's own understanding, certain nuances are not fully conveyed. For that, one can read my book 'The Age of Deception' which is available from my website, as well as my many other articles, both on my website and on Substack. www.virusesarenotcontagious.com.

Which comments specifically are causing confusion? Regarding the quote you mentioned, I was highlighting the point that demonstrating the existence of viruses does not depend on the presence of antibodies or genomics. It can rely solely on the examination of the morphology of viruses via EM, which has been a traditional method employed long before the sequencing of viruses became feasible.

Since it is still not obvious to you, I am particularly focused on certain sections of that article at this link: https://neosante.eu/newsletter/jeffgreen/Jeff Green ARTICLE Neosante 134 EV 2.pdf which was written ONLY 3 MONTHS AGO! While there may be MANY sections THROUGOUT the article that now may appear inconsistent with your claims you are making in these comments, the sections that the writer has designated with the following subtitles: "The consistency of a well-tempered viral process", also "Controlled production of viruses, driven by the cell's genome" and "The virus-antibody tandem" are of particular interest in this exchange we are having.

These appear to be rather HUGE, significant aspects that are difficult to sweep away using the excuse of "the writer's own understanding" preventing "certain nuances" from being "fully conveyed"!! Are you now denouncing everything the author wrote in THOSE SECTIONS??!! If not everything, then what "nuances" is the author lacking in THOSE sections...?? Do you now consider THOSE SECTIONS to be inaccurate reflections of your theories?? If yes, how are they now inaccurate...???

No, I am not denouncing anything at all. All of those aspects you referred to accurately reflect my work. You are definitely implying a lot. I simply suggested that the article in question is limited in length and is not as comprehensive as my book is. As I stated, it captures the essence of my work. If you wish to understand my beliefs precisely, then read directly from the source—my own writings.

Do you have a specific question to ask?

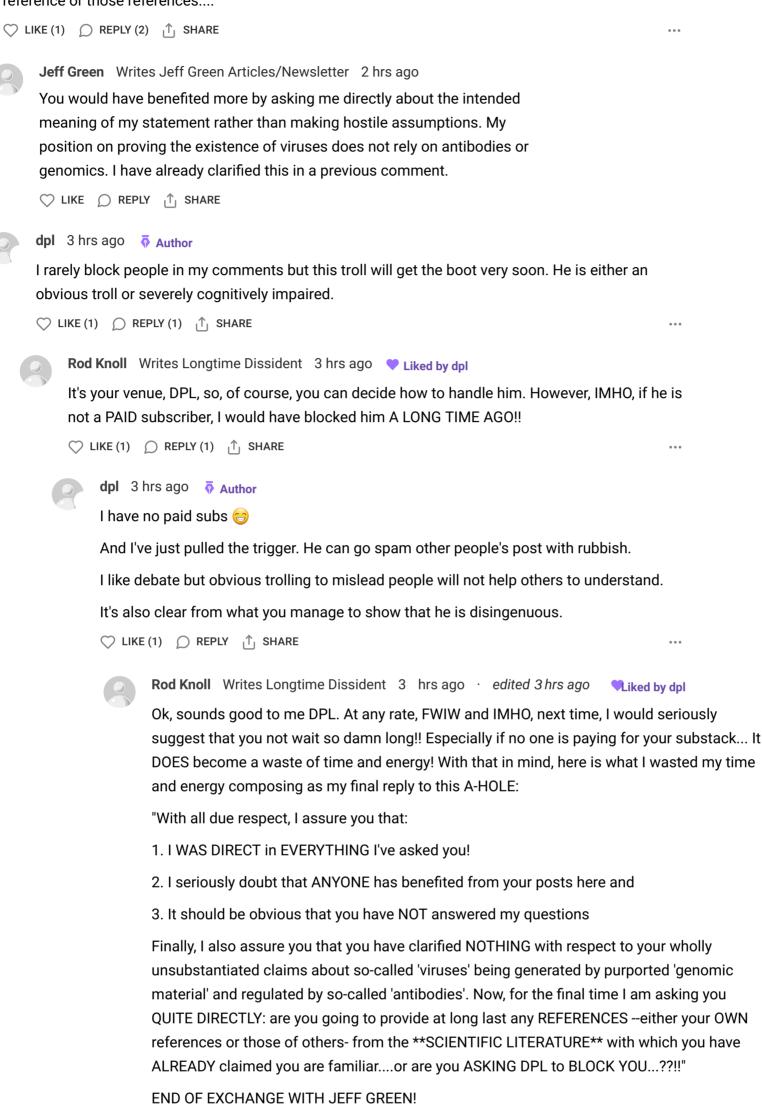

Rod Knoll Writes Longtime Dissident 3 hrs ago · edited 3 hrs ago ♥ Liked by dpl

Dude, you LITERALLY wrote above JUST YESTERDAY that your "...stance does not depend on antibodies or genomics at all...."!!

This article which you now appear to be BACKTRACKING contains LARGE sections DEVOTED to summaries of YOUR theories surrounding...wait for it....GENOMICS AND ANTIBODIES and what you apparently claim is their "involvement" in "generating" and/or "regulating" so-called "viruses"!! This SHOULD be OBVIOUS to anyone who does NOT have reading comprehension ISSUES!! Now, again, I am asking you for the last time, here. Which do you now consider inaccurate: your statement from JUST YESTERDAY or the article written by some other author from three months ago...???!!!

Furthermore, have you managed to publish ANYTHING AT ALL in the **PEER-REVIEWED** biomedical literature --EVEN just a "review" paper-- of your theories on "viruses"...??? If yes, please provide THAT reference or those references....

Hours later, there was an attempt by Rod Knoll and 'dpl' to delete evidence of comments.
